1. The following 8 chronic diseases are excluded from the table: MDR-TB, Tuberculosis, Syphilis, Gonorrhea, HIV Infection, AIDS, Hansen Disease and Creutzfeldt-Jakob Disease.

2. Reported cases.

3. The epidemiological week calendar established by the World Health Organization is adopted for calculating each week's cumulative total.

Suspected Clusters

- In regard to disease clusters, 5 outbreak events were reported, including 3 influenza-like illness clusters, 1 upper respiratory tract infection cluster and 1 dengue fever cluster.

Imported Infectious Diseases

- 10 confirmed infectious cases were imported from 5 countries during week 25 of 2013.

Disease \ Country	Country					Total
	Indonesia	China	Singapore	Sri Lanka	Thailand	
Dengue Fever	2		1	1	1	5
Shigellosis	2					2
Amoebiasis		2				2
Hepatitis B	1					1
Total	5	2	1	1	1	10

Note: The statistics listed in this table include imported cases that were either confirmed or updated* in the previous week.

- A total of 291 infectious cases were imported from 24 countries in 2013.
- Top 3 imported diseases : Dengue fever (82), Amoebiasis (73), Shigellosis (64).
- Top 3 countries responsible for most imported cases : Indonesia (168), China (26), Thailand (20).

Summary of This Week

- **Enterovirus** : During week 25, no new case of enterovirus infection with severe complications was confirmed. Thus far this year, 4 cases of enterovirus infection with severe complications have been confirmed. The ER consultation rate for enterovirus infection has decreased from the previous week and the epidemic has slowed down. Coxsackie A virus remains the dominant virus strain circulating in the community, and coxsackie-virus A6 was detected in the majority of the cases. As the epidemic has reached its peak, Taiwan CDC continues to closely monitor enterovirus activity. For more detailed reports, please visit Enterovirus Weekly Reports: [Weekly Report of Enterovirus Infection](#)
- **Dengue fever** : New dengue cases arose from indigenous clusters in Chunrih Township, Sinyuan Township and Chaozhou Township, Pingtung City have continued to occur. The virus types identified among these cases are different. Taiwan CDC continues to

closely monitor the epidemic situation. Hence, the public is reminded to clean and remove any indoor and outdoor water containers, and doctors are advised to stay vigilant for and notify any suspected cases to the health authority promptly to prevent further spread of the disease.

- **Influenza** : During week 25, 28 new cases of flu-related complications, including 19 cases of H3N2 and 9 cases of H1N1, and 3 deaths associated with influenza, were confirmed. Since the beginning of this influenza season, a cumulative total of 928 cases, including 66 deaths, have been reported. The positive rate of influenza virus in the community has decreased from the previous week. H3N2 is the dominant strain circulating in the community, followed by H1N1. Taiwan CDC continues to closely monitor influenza activity. For more detailed reports, please visit Influenza Express website : [Influenza Express](#)
