Note: The statistics listed in this table include imported cases that were either confirmed or updated\* in the previous week.

- A total of 67 infectious cases were imported from 12 countries in 2014.
- Top 3 imported diseases : Dengue fever (19), Amoebiasis (13), Shigellosis (13).
- Top 3 countries responsible for most imported cases : Indonesia (32), Philippines (10), China (6).

## Summary of This Week

- **Influenza** : The influenza epidemic has reached its peak. In addition, the ER consultation rate for influenza-like illness also appeared to peak, and the positive rate of influenza virus in the community and the rate of influenza complications have also continued to increase. Currently, H3N2 is the dominant strain circulating in the community, followed by H1N1 and type B, both of which have become more active. As schools have been reopening, health education concerning cough etiquette and hand hygiene should be strengthened to prevent possible outbreaks.
