- The following 8 chronic diseases are excluded from the table: MDR-TB, Tuberculosis, Syphilis, Gonorrhea, HIV Infection, AIDS, Hansen Disease and Creutzfeldt-Jakob Disease.
- Reported cases.
- Since 2014/1/1, "Varicella" was modified to "Complicated Varicella".
- Since 2014/3/6, the case definition for confirmed Acute hepatitis C was changed from "meet the clinical **and** laboratory conditions" to "meet the clinical **or** laboratory conditions".
- Since 2014/7/1, various subtypes of human cases of avian influenza are reported as "novel influenza A virus infections", a Category V Notifiable Infectious Disease. The original "H5N1 flu" and "H7N9 flu", which were respectively listed as a Category I Notifiable Infectious Disease and a Category V Notifiable Infectious Disease were removed from the list on the same day.

Suspected Clusters

- Fourteen clusters were reported, including 9 diarrhea clusters, 3 upper respiratory tract infection clusters, and 2 varicella clusters.

Imported Infectious Diseases

- 16 confirmed cases were imported from 5 countries during Week 51 of 2015.

Note: The statistics listed in this table include imported cases that were either confirmed or updated* in the previous week.

- A total of 765 confirmed cases were imported from 35 countries in 2015.
- Top 3 imported diseases : Dengue fever (357), Amoebiasis (194), Shigellosis (98).
- Top 3 countries responsible for most imported cases : Indonesia (342), Philippines (78), Vietnam (72).

Summary of Epidemic

- **Dengue Fever** : Dengue activity has slowed down. The public is urged to clean up and remove any vector breeding sites. The epidemic has decreased in Kaohsiung City and the number of new cases reported during Week 51 is 20% less than that reported during Week 50. Since May 1, 2015, 212 deaths have been confirmed to be caused by dengue infection, while 15 deaths are waiting to be reviewed. As of now, 23 dengue cases are still being treated in the intensive care unit (ICU), and 98.5% of the reported cases have recovered.
- **Enterovirus** : Enterovirus season has continued and enterovirus activity is above the epidemic threshold. The numbers of visits to outpatient services and ER for enterovirus infection during Week 51 have decreased, and are lower than the epidemic threshold. The specimens tested positive for Enterovirus 71 have been identified in the community. The majority of the cases were reported in Yilan County and Yunlin County.
- **Influenza** : Influenza activity has slightly increased and remained at the baseline level.
