	Middle East Respiratory Syndrome Coronavirus	0	0	0	0	
	Yellow Fever	0	0	0	0	
Zika Virus Infection	0	0	2	0		

1. The following 8 chronic diseases are excluded from the table: MDR-TB, Tuberculosis, Syphilis, Gonorrhoea, HIV Infection, AIDS, Hansen Disease and Creutzfeldt-Jakob Disease.

2. Reported cases.

3. Since 2014/1/1, "Varicella" was modified to "Complicated Varicella".

4. Since 2014/3/6, the case definition for confirmed Acute hepatitis C was changed from "meet the clinical **and** laboratory conditions" to "meet the clinical **or** laboratory conditions".

5. Since 2014/7/1, various subtypes of human cases of avian influenza are reported as "novel influenza A virus infections", a Category V Notifiable Infectious Disease. The original "H5N1 flu" and "H7N9 flu", which were respectively listed as a Category I Notifiable Infectious Disease and a Category V Notifiable Infectious Disease were removed from the list on the same day.

Suspected Clusters

- Thirteen clusters were reported, including 5 diarrhea clusters, 3 tuberculosis clusters, 2 varicella clusters, 1 enterovirus infection cluster, 1 upper respiratory tract infection cluster, and 1 influenza-like illness cluster.

Imported Infectious Diseases

- 17 confirmed cases were imported from 6 countries during Week 21 of 2016.

Country Disease	Indonesia	Thailand	Singapore	Malaysia	China	Japan	Total
Dengue Fever	2	1	1	1			5
Amoebiasis	4						4
Hepatitis A		2			1	1	4
Shigellosis	2	1					3
Scrub Typhus		1					1
Total	8	5	1	1	1	1	17

Note: The statistics listed in this table include imported cases that were either confirmed or updated* in the previous week.

- A total of 267 confirmed cases were imported from 23 countries in 2016.
- Top 3 imported diseases : Dengue fever (113), Amoebiasis (47), Shigellosis (42).
- Top 3 countries responsible for most imported cases : Indonesia (125), Thailand (24), Malaysia (20).

Summary of Epidemic

- Enterovirus** : The enterovirus activity has increased slowly and the peak of enterovirus season is fast approaching. Coxsackie A virus is currently the dominant strain circulating in the community. Sporadic cases of enterovirus 71 infection have been confirmed recently. This year, a total of 45 cases of enterovirus 71 infection, including 3 severe cases, 37 mild cases and 5 suspected severe cases, have been confirmed. The public is urged to enhance personal hygiene and stay vigilant for suspicious symptoms of enterovirus infection with severe complications in infants.
- Dengue Fever** : Imported cases have continued to be reported. The recent high temperatures and the continuous occurrence of intermittent rain have promoted mosquito growth, elevating the risk of dengue transmission. The public is urged to clean up and remove any vector breeding sites and take prevention measures against mosquito bites.
