	Toxoplasmosis	0	0	5	7
	Tularremia	0	0	0	0
	Varicella ²	164	144	5070	3915
Category V	Ebola Hemorrhagic Fever	0	0	0	0
	Ebola-Marburg Hemorrhagic Fever	0	0	0	0
	H7N9 Influenza	0	0	1	0
	Lassa Fever	0	0	0	0
	Rift Valley Fever	0	0	0	0
	Middle East Respiratory Syndrome Coronavirus	0	0	0	0
Yellow Fever	0	0	0	0	

1. The following 8 chronic diseases are excluded from the table: MDR-TB, Tuberculosis, Syphilis, Gonorrhea, HIV Infection, AIDS, Hansen Disease and Creutzfeldt-Jakob Disease.

2. Reported cases.

3. The epidemiological week calendar established by the World Health Organization is adopted for calculating each week's cumulative total.

Suspected Clusters

- In regard to disease clusters, 5 outbreak events were reported, including 2 upper respiratory tract infection clusters, one diarrhea cluster, one enterovirus infection cluster, and one hepatitis cluster.

Imported Infectious Diseases

- 11 confirmed infectious cases were imported from 6 countries during week 24 of 2013.

Disease \ Country	Country						Total
	Indonesia	China	Brazil	Myanmar	Japan	Thailand	
Dengue Fever	2		1	1		1	5
Shigellosis	2						2
Rubella					1		1
Amoebiasis	1*						1
Hepatitis A		1					1
Hepatitis B		1*					1
Total	5	2	1	1	1	1	11

Note: The statistics listed in this table include imported cases that were either confirmed or updated* in the previous week.

- A total of 281 infectious cases were imported from 23 countries in 2013.
- Top 3 imported diseases : Dengue fever (77), Amoebiasis (71), Shigellosis (62).
- Top 3 countries responsible for most imported cases : Indonesia (163), China (24), Thailand (19).

Summary of This Week

- **Enterovirus** : During week 24, no new case of enterovirus infection with severe complications was confirmed. Thus far this year, 4 cases of enterovirus infection with severe complications have been confirmed. Although the ER consultation rate for enterovirus infection has been on the rise, the increase has slowed down. Coxsackie A virus remains the dominant virus strain circulating in the community, and coxsackie-virus A6 was detected in the majority of the cases, and there were sporadic EV71 positive specimens have been detected in central Taiwan during the past few weeks. As is the epidemic has reached its peak, Taiwan CDC continues to closely monitor enterovirus activity. For more detailed reports, please visit Enterovirus Weekly

Reports: [Weekly Report of Enterovirus Infection](#)

- **Dengue fever** : New dengue cases arose from indigenous clusters in Chunrih Township, Sinyuan Township and Chaozhou Township, Pingtung City have continued to occur. The virus types identified among these cases are different. Taiwan CDC continues to closely monitor the epidemic situation. Hence, the public is reminded to clean and remove any indoor and outdoor water containers, and doctors are advised to stay vigilant for and notify any suspected cases to the health authority promptly to prevent further spread of the disease.
- **Influenza** : During week 24, 42 new cases of flu-related complications, including 17 cases of H1N1, 25 cases of H3N2, and no new death associated with influenza, were confirmed. Since the beginning of this influenza season, a cumulative total of 900 cases, including 63 deaths, have been reported. The positive rate of influenza virus in the community has increased from the previous week. H1N1 is the dominant strain circulating in the community, followed by H3N2. Taiwan CDC continues to closely monitor influenza activity. For more detailed reports, please visit Influenza Express website : [Influenza Express](#)
