	Rift Valley Fever	0	0	0	0	0	0
	Yellow Fever	0	0	0	0	0	0
Zika virus infection	0	0	1	1	3	3	

- ★The weekly and cumulative total numbers include indigenous and imported cases of notifiable infectious diseases.
- The following chronic diseases are excluded from the table: MDR-TB, Tuberculosis, Syphilis, Gonorrhea, HIV Infection, AIDS, Hansen Disease and Creutzfeldt-Jakob Disease.
- Numbers of mumps, neonatal tetanus and tetanus cases are summed up by the week of report.
- Since 2016/1/22, "Zika Virus Infection" was listed as a Notifiable Infectious Disease.
- Since 2018/1/1, "Listeriosis" was listed as a Notifiable Infectious Disease.

Suspected Clusters

- Nineteen clusters were reported, including 8 tuberculosis clusters, 7 diarrhea clusters, 2 upper respiratory tract infection clusters, 1 influenza-like illness cluster, and 1 varicella cluster.

Imported Infectious Diseases

- There were 22 confirmed imported cases from 7 countries during week 32 of 2018.

Country \ Disease	Indonesia	Philippines	Vietnam	Malaysia	Thailand	Cambodia	China	Total
DF		3	2	1	1	2		9
Amoebiasis	5							5
Shigellosis	2			1				3
Chikungunya Fever		2						2
Rubella							1	1
Listeriosis					1			1
Acute Hepatitis A	1							1
Total	8	5	2	2	2	2	1	22

Note: The table summarized the number of imported cases that were either **confirmed** or **updated** in the given week.

- There are 321 confirmed imported cases from 24 different countries in 2018. The top 3 countries are Indonesia (95), Philippines (46), and Thailand (36).
- Top 3 imported diseases are Dengue Fever (142), Amoebiasis (73), and Shigellosis (32).

Summary of Epidemic

- **Enterovirus:** Taiwan is in the midst of enterovirus season. Most reported cases experienced mild symptoms. In addition, the cases of EV71 infection in the community remain elevated, we should stay alert against enterovirus infection.
- **Dengue Fever:** The epidemic has increased in Southeast Asian countries; therefore, the imported cases are continuously increasing in Taiwan. In addition, there is a second wave of the indigenous dengue fever in Taiwan. As the temperature and rainfall increase, the numbers of water-holding container and the rate of mosquito development are increasing. Therefore, the risk of dengue fever for both imported and indigenous cases is expected to be higher.
- **Japanese Encephalitis:** The epidemic has passed its peak, but it is still in the midst of Japanese encephalitis season. Cases are likely to occur sporadically.
- **Scrub Typhus:** Taiwan is in the midst of scrub typhus season. The current primarily affected areas include Hualien County and Taitung County.
