	Rift Valley Fever	0	0	0	0
	Middle East Respiratory Syndrome Coronavirus	0	0	0	0
	Yellow Fever	0	0	0	0
Zika Virus Infection ⁶	0	0	9	0	

1. The following 8 chronic diseases are excluded from the table: MDR-TB, Tuberculosis, Syphilis, Gonorrhoea, HIV Infection, AIDS, Hansen Disease and Creutzfeldt-Jakob Disease.

2. Reported cases.

3. Since 2014/1/1, "Varicella" was modified to "Complicated Varicella".

4. Since 2014/3/6, the case definition for confirmed Acute hepatitis C was changed from "meet the clinical **and** laboratory conditions" to "meet the clinical **or** laboratory conditions".

5. Since 2014/7/1, various subtypes of human cases of avian influenza are reported as "novel influenza A virus infections", a Category V Notifiable Infectious Disease. The original "H5N1 flu" and "H7N9 flu", which were respectively listed as a Category I Notifiable Infectious Disease and a Category V Notifiable Infectious Disease were removed from the list on the same day.

6. Since 2016/1/22, "Zika Virus Infection" was listed as a Notifiable Infectious Disease.

Suspected Clusters

- Twenty-four clusters were reported, including 12 diarrhea clusters, 6 varicella clusters, 5 upper respiratory tract infection clusters, and 1 influenza-like illness cluster.

Imported Infectious Diseases

- 17 confirmed cases were imported from 7 countries during Week 40 of 2016.

Disease	Country							Total
	Indonesia	Malaysia	China	Vietnam	Singapore	Thailand	Philippines	
Dengue Fever	1	3		1	1	1	1	8
Amoebiasis	4			1				5
Hepatitis A			2					2
Zika virus infection		1						1
Hepatitis E			1					1
Total	5	4	3	2	1	1	1	17

Note: The statistics listed in this table include imported cases that were either confirmed or updated* in the previous week.

- A total of 620 confirmed cases were imported from 37 countries in 2016.
- Top 3 imported diseases : Dengue fever (277), Amoebiasis (121), Hepatitis A (79).
- Top 3 countries responsible for most imported cases : Indonesia (257), Philippines (67), Thailand (58).

Summary of Epidemic

- **Dengue Fever** : The epidemic has increased gradually in Southeast Asian countries. Imported cases have continued to be reported. The recent occurrence of rain has still promoted mosquito growths and elevated the risk of dengue transmission. The public is urged to clean up and remove any vector breeding sites and take prevention measures against mosquito bites.
- **Zika Virus Infection** : The epidemic has continuously increased in Southeast Asian countries, elevating the risk of importing Zika virus from these countries.
- **Scrub Typhus** : The number of cases reported has decreased continuously. The epidemic activity remains at its peak. The endemic areas are primarily eastern and outlying islands of Taiwan.
- **Enterovirus** : The number of visits to outpatient services and ER for enterovirus infection has

increased, and the epidemic is expected to gradually increase. Coxsackie A virus is currently the dominant strain circulating in the community. Sporadic cases of enterovirus 71 infection have been confirmed recently. This year, a total of 147 cases of enterovirus 71 infection, including 20 severe cases, 125 mild cases and 2 suspected severe cases, have been confirmed. The public is urged to enhance personal hygiene and stay vigilant for suspicious symptoms of enterovirus infection with severe complications in infants.
