	Rift Valley Fever	0	0	0	0	0	0
	Yellow Fever	0	0	0	0	0	0
Zika virus infection	0	0	2	2	4	4	

- ★The weekly and cumulative total numbers include indigenous and imported cases of notifiable infectious diseases.
- MDR-TB, Tuberculosis, Syphilis, Gonorrhea, HIV Infection, AIDS, Hansen Disease and Creutzfeldt-Jakob Disease are excluded from the table.
- Numbers of mumps, neonatal tetanus and tetanus cases are summed up by the week of report.
- Since 2016/1/22, "Zika Virus Infection" was listed as a Notifiable Infectious Disease.
- Since 2018/1/1, "Listeriosis" was listed as a Notifiable Infectious Disease. Symbols "... " means not under surveillance.

Suspected Clusters

- Twenty-two clusters were reported, including 7 tuberculosis clusters, 5 diarrhea clusters, 2 upper respiratory tract infection clusters, 2 influenza-like illness clusters, and 6 varicella clusters.

Imported Infectious Diseases

- There were 10 confirmed imported cases from 7 countries during week 47 of 2018.

Country Disease	Indonesia	Vietnam	Thailand	India	Singapore	Philippines	Cambodia	Total
DF		2	1	1	1		1	6
Amoebiasis	2					1		3
Scrub Typhus			1					1
Total	2	2	2	1	1	1	1	10

Note: The table summarized the number of imported cases that were either **confirmed** or **updated** in the given week.

- There are 588 confirmed imported cases from 30 different countries in 2018. The top 3 countries are Indonesia (174), Philippines (72), and Vietnam (66).
- Top 3 imported diseases are Dengue Fever (290), Amoebiasis (131), and Shigellosis (48).

Summary of Epidemic

- **Dengue Fever:** The risk of indigenous dengue epidemics has been slowed down. However, cases are likely to occur sporadically. The dengue epidemics are still at its peak or in the midst in some of the nearby Asian countries, the potential risks of imported cases remain in Taiwan.
- **Influenza:** Influenza activity is expected to gradually increase due to large temperature differences between night and day.
- **Enterovirus:** Most reported cases experienced mild symptoms. However, cases of enterovirus infection with severe complications are likely to occur sporadically.
