1. The following 8 chronic diseases are excluded from the table: MDR-TB, Tuberculosis, Syphilis, Gonorrhea, HIV Infection, AIDS, Hansen Disease and Creutzfeldt-Jakob Disease.

2. Reported cases.

3. The epidemiological week calendar established by the World Health Organization is adopted for calculating each week's cumulative total.

Suspected Clusters

- In regard to disease clusters, 5 outbreak events were reported, including 3 influenza-like illness clusters in the Central Area and East Area, 1 upper respiratory infection cluster in the Kao-Ping Area, and 1 varicella cluster in the South Area.

Imported Infectious Diseases

- 10 confirmed infectious cases^{**} were imported from 3 countries during week 3 of 2012.

Disease \ Country	Country			Total
	Indonesia	Vietnam	Australia	
Amoebiasis	4★			4
Shigellosis	4			4
Dengue Fever		1		1
Hepatitis B			1	1
Total	8	1	1	10

Note: ★One amoebiasis case was confirmed on Jan. 13, but excluded from the statistics for week 3 (Jan. 15 – Jan. 21).

^{**}Cases were diagnosed or based on imported case data in the last week. The following cumulative number was statistical by the week of onset.

- A total of 17 infectious cases were imported from 4 countries in 2012.
- Top 3 imported diseases : DF (7), Shigellosis (5), Amoebiasis (5).
- Top 3 countries responsible for most imported cases : Indonesia (11), Vietnam (4), Malaysia (1).

Summary of This Week

- **Influenza** : The overall level of influenza activity has peaked, and influenza type B virus is currently the dominant influenza virus strain circulating in the community.
- **Enterovirus** : The enterovirus 71 infection epidemic has been on the rise. The ER consultation rate for hand-foot-and-mouth disease has remained high, and the threat of enterovirus 71 still persists as mild cases of enterovirus 71 and cases of enterovirus infection with severe complications have still been detected. Therefore, parents are reminded to pay attention to personal, child and infant hygiene in order to reduce the risk of enterovirus infection. If children develop precursor symptoms of enterovirus

infection with severe complications, they should be immediately sent to a large hospital for medical attention in order to grasp the best treatment timing. For more detailed reports, please visit Enterovirus Weekly Reports:

- **Dengue Fever** : The dengue fever epidemic has been slowing down overall. Sporadic cases have still been reported.
- **Travel Notification** : Taiwan CDC advises all people traveling abroad to pay attention to the public health status of their chosen destination. Taiwan CDC urges travelers experiencing discomfort during the trip or upon arrival to contact quarantine services at the airport and seek immediate medical attention. Informing doctors of the personal travel history does not only facilitate diagnosis, but also implementation of subsequent measures by the health authority to prevent further spread of diseases.
