	Toxoplasmosis	0	0	13	14
Tularremia	0	0	0	0	
Category V	Ebola Virus Disease	0	0	0	0
	Ebola-Marburg Hemorrhagic Fever	0	0	0	0
	Novel Influenza A Virus Infections ⁵	0	0	0	0
	Lassa Fever	0	0	0	0
	Rift Valley Fever	0	0	0	0
	Middle East Respiratory Syndrome Coronavirus	0	0	0	0
Yellow Fever	0	0	0	0	

- The following 8 chronic diseases are excluded from the table: MDR-TB, Tuberculosis, Syphilis, Gonorrhea, HIV Infection, AIDS, Hansen Disease and Creutzfeldt-Jakob Disease.
- Reported cases.
- Since 2014/1/1, "Varicella" was modified to "Complicated Varicella".
- Since 2014/3/6, the case definition for confirmed Acute hepatitis C was changed from "meet the clinical **and** laboratory conditions" to "meet the clinical **or** laboratory conditions".
- Since 2014/7/1, various subtypes of human cases of avian influenza are reported as "novel influenza A virus infections", a Category V Notifiable Infectious Disease. The original "H5N1 flu" and "H7N9 flu", which were respectively listed as a Category I Notifiable Infectious Disease and a Category V Notifiable Infectious Disease were removed from the list on the same day.

Suspected Clusters

- Twenty-three clusters were reported, including 11 diarrhea clusters, 4 tuberculosis clusters, 4 upper respiratory tract infection clusters, 2 varicella clusters, 1 fever of unknown origin cluster, and 1 influenza-like illness cluster.

Imported Infectious Diseases

- 15 confirmed cases were imported from 4 countries during Week 50 of 2015.

Country Disease	Indonesia	Malaysia	Vietnam	Philippines	Total
Dengue Fever		4	2	1	7
Shigellosis	5				5
Amoebiasis	1			1	2
FluSC		1			1
Total	6	5	2	2	15

Note: The statistics listed in this table include imported cases that were either confirmed or updated* in the previous week.

- A total of 748 confirmed cases were imported from 34 countries in 2015.
- Top 3 imported diseases : Dengue fever (344), Amoebiasis (191), Shigellosis (97).
- Top 3 countries responsible for most imported cases : Indonesia (338), Philippines (72), Vietnam (70).

Summary of Epidemic

- **Dengue Fever** : Dengue activity has slowed down. The public is urged to clean up and remove any vector breeding sites. The epidemic has decreased in Kaohsiung City and the number of new cases reported during Week 50 is 40% less than that reported during Week 49. Since May 1, 2015, 209 deaths have been confirmed to be caused by dengue infection, while 20 deaths are waiting to be reviewed. As of now, 44 dengue cases are still being treated in the intensive care unit (ICU), and 98.1% of the reported cases have recovered.
- **Enterovirus** : Enterovirus season has continued and enterovirus activity is above the epidemic threshold. The numbers of visits to outpatient services and ER for enterovirus infection during Week 50 have decreased, and are lower than the epidemic threshold. The specimens tested positive for Enterovirus 71 have been identified in the community. The majority of the cases were reported in Yilan County and Yunlin County.
- **Influenza** : Influenza activity has slightly increased and remained at the baseline level.
