

### Summary

According to the laboratory surveillance<sup>1</sup>, Coxsackie A was the predominant virus type in the past 4 weeks (Figure 1). During week 18, the total number of outpatient and ER visits for enterovirus infection was 2,743, which was far below the national baseline (11,000 visits), show as Figure 2.

As of May 10, 2021, no new EVSC<sup>2</sup> case was confirmed in 2021(Figure 3).
