Week 34, August 22 - 28, 2021

## **Summary**

According to the laboratory surveillance<sup>1</sup>, there were no enterovirus isolates (Figure 1), during the past five weeks (week 28 - week 32). During week 34, the total number of outpatient and ER visits for enterovirus infection was 748, which was far below the national baseline (11,000 visits), show as Figure 2.

As of August 30, 2021, no new EVSC<sup>2</sup> case was confirmed in 2021(Figure 3).
