

## **Summary**

According to the laboratory surveillance<sup>1</sup>, the number of enterovirus isolates continued to be low in the past 4 weeks (Figure 1). During week 6, the total number of outpatient and ER visits for enterovirus infection was 1,585, which was increasing in recent two weeks but still far below the threshold (11,000 visits), shown as Figure 2.

Between February 7 and 13, no new EVSC<sup>2</sup> case was confirmed. There has been one EVSC case since 2023 (Figure 3),and case was caused by EVD68.
