

### Summary

According to the laboratory surveillance<sup>1</sup>, there were no enterovirus isolates (Figure 1), during the past four weeks (week 28 - week 31). During week 33, the total number of outpatient and ER visits for enterovirus infection was 765, which was far below the national baseline (11,000 visits), show as Figure 2.

As of August 23, 2021, no new EVSC<sup>2</sup> case was confirmed in 2021 (Figure 3).
