

Summary

According to the laboratory surveillance¹, rhinovirus was dominant during recent weeks (Figure 1). During week 37, the total number of outpatient and ER visits for enterovirus infection was 489, which was far below the national baseline (11,000 visits), show as Figure 2.

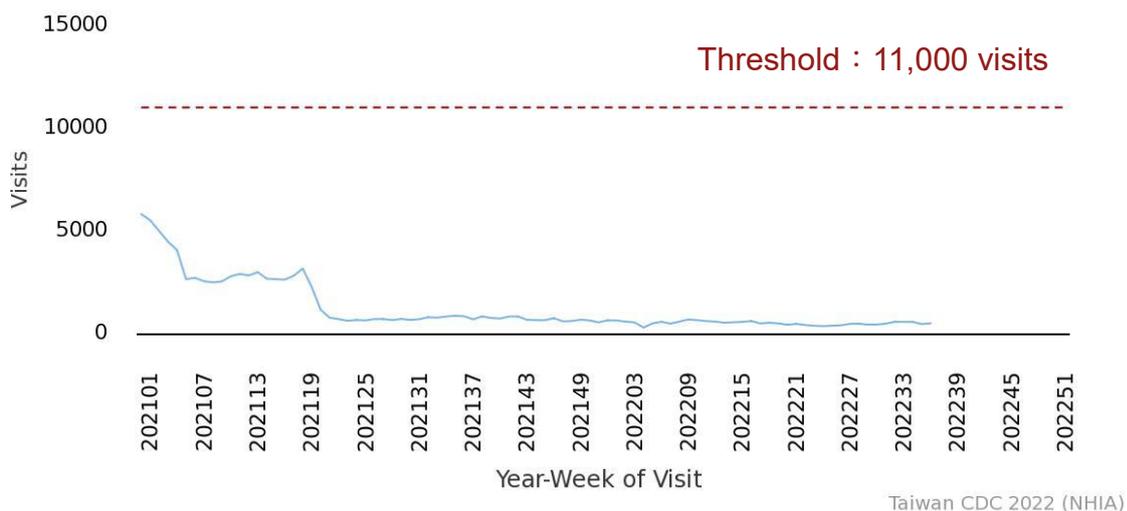

As of September 19, 2022, no new EVSC² case was confirmed in 2022(Figure 3).
