## Summary

According to the laboratory surveillance<sup>1</sup>, Coxsackie A was the predominant virus type in the past 4 weeks (Figure 1). During week 13, the total number of outpatient and ER visits for enterovirus infection was 2,770, which was far below the national baseline (11,000 visits), show as Figure 2.

As of April 5, 2021, no new EVSC<sup>2</sup> case was confirmed in 2021(Figure 3).

For further information, please visit the Taiwan National Infectious Disease Statistics System (NIDSS) website at <a href="https://nidss.cdc.gov.tw/en/Home/Index?op=1">https://nidss.cdc.gov.tw/en/Home/Index?op=1</a>
