

Summary

According to the laboratory surveillance¹, Coxsackie A was the predominant virus type in the past 4 weeks (Figure 1). During week 14, the total number of outpatient and ER visits for enterovirus infection was 2,924, which was far below the national baseline (11,000 visits), show as Figure 2.

As of April 12, 2021, no new EVSC² case was confirmed in 2021(Figure 3).
