1. ★The weekly and cumulative total numbers include indigenous and imported cases of notifiable infectious diseases.
 2. MDR-TB, Tuberculosis, Syphilis, Gonorrhea, HIV Infection, AIDS, Hansen's Disease and Creutzfeldt-Jakob Disease are excluded from the table.
 3. Numbers of Mumps and Tetanus are based on reported cases and summed up by week of report.
 4. Since September 1, 2024, "Severe Pneumonia with Novel Pathogens" was revised to "Severe Complicated COVID-19", along with an updated case definition.

Suspected Clusters

Forty-seven clusters related to Diarrhea (26), Upper respiratory tract infection (20), and Enterovirus (1) were reported during week 36.

Imported Infectious Diseases

- There were 11 imported cases from 3 countries / areas during week 36.
("Other" indicates that the origins of the infection may be in specific areas, undetermined due to a lack of evidence, or still being investigated, etc.)
 - Dengue Fever** : 5 cases from the Philippines (4) and Indonesia (1).
 - Amoebiasis** : 4 cases from Indonesia (3) and the Philippines (1).
 - Malaria** : 1 case from Cameroon.
 - Mpox** : 1 case from the Philippines.
- During week 1-36, there were 497 imported cases of notifiable diseases. The top three were Dengue Fever(195), Amoebiasis(107), and Severe Pneumonia with Novel Pathogens(62).
- During week 1-36, imported cases of notifiable diseases were from 34 countries/areas. The top three were Indonesia(188), China(47), and the Philippines(38).

Summary of Epidemic

- **Enterovirus infection:** The epidemic is similar to previous week and above the threshold.
- **Diarrhea:** The number of outpatient and emergency room visits, as well as the reported number of clusters, remains high and exceeds the levels observed during the same period in recent years. Additionally, among the norovirus-positive clusters this years, genotyping results indicate that GII.17 accounts for nearly 60% of norovirus GII infected cases.
