

### Summary

According to the laboratory surveillance<sup>1</sup>, there were no enterovirus isolates (Figure 1), during the past six weeks (week 21 - week 26). During week 28, the total number of outpatient and ER visits for enterovirus infection was 676, which was far below the national baseline (11,000 visits), show as Figure 2.

As of July 19, 2021, no new EVSC<sup>2</sup> case was confirmed in 2021 (Figure 3).
