- ★The weekly and cumulative total numbers include indigenous and imported cases of notifiable infectious diseases.
- MDR-TB, Tuberculosis, Syphilis, Gonorrhea, HIV Infection, AIDS, Hansen Disease and Creutzfeldt-Jakob Disease are excluded from the table.
- Numbers of mumps and tetanus cases are summed up by the week of report.
- Since 2018/1/1, "Listeriosis" was listed as a Notifiable Infectious Disease.

## Suspected Clusters

- Thirty-four clusters were reported, including 5 tuberculosis clusters, 11 diarrhea clusters, 4 upper respiratory tract infection clusters, 8 influenza-like illness clusters, 2 fever of unknown origin clusters, and 4 varicella clusters.

## Imported Infectious Diseases

- There were 13 confirmed imported cases from 7 countries during week 10 of 2019.

Countries Diseases	Indonesia	Vietnam	Philippines	Japan	Maldives	Malaysia	Thailand	Total
DF	3	3			1	1	1	9
Measles		1		1				2
Amoebiasis	1		1					2
Total	4	4	1	1	1	1	1	13

Note: The table summarized the number of imported cases that were either **confirmed** or **updated** in the given week.

- There are 142 confirmed imported cases from 11 different countries in 2019. The top 3 countries are Indonesia (42), Vietnam (36), and Philippines (26).
- Top 3 imported diseases are Dengue Fever (88), Amoebiasis (21), and Measles (14).

## Summary of Epidemic

- **Influenza** : As the temperature is affected by the cold air mass this week, the epidemic may fluctuate. However, the epidemic is expected to gradually decline in the community. Influenza A/H1N1 was the predominant virus type.
- **Measles** : Epidemics in neighboring countries continue to rise. There are some measles cases with unknown source of infection in Taiwan; therefore, the number of cases are expected to increase. However, it is not likely to cause a large scale epidemics.
