 $<sup>\</sup>bigstar$  The weekly and cumulative total numbers include indigenous and imported cases of notifiable infectious diseases.

Numbers of mumps and tetanus cases are summed up by the week of report.

Since 2020/1/15, "Severe Pneumonia with Novel Pathogens" was listed as a Notifiable Infectious Disease.

MDR-TB, Tuberculosis, Syphilis, Gonorrhea, HIV Infection, AIDS, Hansen's Disease and Creutzfeldt-Jakob Disease are excluded from the table.

## **Suspected Clusters**

Nineteen clusters related to diarrhea (13), varicella (3), tuberculosis (2), and upper respiratory tract infection (1) were reported during week 40.

## **Imported Infectious Diseases**

There were 13 imported cases from 5 countries during week 40.

| Countries Diseases                    | Indonesia | Philippines | USA | Japan | France | Total |
|---------------------------------------|-----------|-------------|-----|-------|--------|-------|
| Severe Pneumonia with Novel Pathogens |           | 2           | 1   | 1     | 1      | 7     |
| Amoebiasis                            |           |             |     |       |        | 6     |
| Total                                 |           | 2           | 1   | 1     | 1      | 13    |

- As of week 40, there were 685 imported cases from 50 countries. The top 3 countries are Indonesia (141), USA (96), and Philippines (75).
- The three notifiable diseases with the highest number of imported cases are Severe Pneumonia with Novel Pathogens (462), Amoebiasis (97), and Dengue Fever (64).

## **Summary of Epidemic**

- Severe Pneumonia with Novel Pathogens: The COVID-19 pandemic is still critical, and risks of importation and local transmission persist.
- **Dengue Fever**: Taiwan is in dengue fever season. The new cases involving cluster might continue to occur. The number of breeding sites increased because of rainfall in northern Taiwan over the past few weeks. The risk of infection in the community continue.
- **Diarrhea**: The epidemic status is expected to raise after the Mid-Autumn Festival.
- Influenza-like illness: The epidemic status is expected to increase gradually because the temperature is fluctuating.
