

Summary

According to the laboratory surveillance¹, there were no enterovirus isolates (Figure 1), during the past few weeks. During week 36, the total number of outpatient and ER visits for enterovirus infection was 836, which was far below the national baseline (11,000 visits), show as Figure 2.

As of September 13, 2021, no new EVSC² case was confirmed in 2021(Figure 3).
