

Summary

According to the laboratory surveillance¹, EV71, EV-D68 and Coxsackie A were identified during the past four weeks (Figure 1). During week 10, the total number of outpatient and ER visits for enterovirus infection was 2,332, which was slightly increasing in recent weeks but still far below the threshold (11,000 visits), as shown in Figure 2.

Between March 7 and 13, no new EVSC² case was confirmed. There has been one EVSC case caused by EV-D68 since 2023 (Figure 3).
