Note: Statistics in the table may be changed by case follow-up records, new evidences, and data debug steps.

* WHO declared Taiwan as a malaria eradicated region in December 1965.

§ No wild poliovirus was detected since 1984. Nationwide surveillance of acute flaccid paralysis (AFP) was used for detecting cases of poliomyelitis after implementing the “Eradication Program for Measles, Congenital Rubella Syndrome, Poliomyelitis and Neonatal Tetanus” in 1992.

※ The case amount of these diseases contained imported ones, including one typhoid fever, eight dengue fever, nine shigellosis, six amoebiasis, and one malaria confirmed in this month.
