Note: Statistics in the table may be changed by case follow-up records, new evidences, and data debug steps.

\* WHO declared Taiwan as a malaria eradicated region in December 1965. Therefore, all confirmed cases were imported ones.

§ No wild poliovirus was detected since 1984. Nationwide surveillance of acute flaccid paralysis (AFP) was used for detecting cases of poliomyelitis after implementing the “Eradication Program for Measles, Congenital Rubella Syndrome, Poliomyelitis and Neonatal Tetanus” in 1992.

※The case amount of these diseases contained imported ones, including two typhoid fever, 26 dengue fever, one paratyphoid fever, seven shigellosis, and 17 amoebiasis confirmed in this month.

## Number of Confirmed Cases of Second-Category Notifiable Diseases-by Age(II)

Note 1: The caseload of MDR-TB was calculated based on domestic citizens and CDC's registration date.

Note 2: Statistics in the table may be changed by case follow-up records, new evidences, and data debug steps.

※ Four cases of acute hepatitis A were imported in this month.

### Number of Confirmed Cases of Third-Category Notifiable Diseases-by Age(I)

Type of Data: Date of disease confirmed

Data Period: 2017/1/1-2017/1/31

| Age         | Pertussis | Tetanus <sup>#</sup> | Japanese Encephalitis | Tuberculosis | Congenital Rubella Syndrome | Acute Hepatitis <sup>**</sup> B | Acute Hepatitis C | Acute Hepatitis D | Acute Hepatitis <sup>**</sup> E | Acute Hepatitis Unspecified |
|-------------|-----------|----------------------|-----------------------|--------------|-----------------------------|---------------------------------|-------------------|-------------------|---------------------------------|-----------------------------|

Note 1: The caseload of tuberculosis was calculated based on domestic citizens and notification date.

Note 2: Statistics in the table may be changed by case follow-up records, new evidences, and data debug steps.

<sup>#</sup> Tetanus was analyzed based on the local health bureau's data receiving date and only reported cases were included in the statistics.

<sup>\*\*</sup> The case amount of these diseases contained imported ones, including two acute hepatitis B and one acute hepatitis E confirmed in this month.

## Number of Confirmed Cases of Third-Category Notifiable Diseases-by Age(II)

Type of Data: Date of disease confirmed

Data Period: 2017/1/1-2017/1/31

| Age         | Mumps # | Legionnaires' ※ Disease | Invasive Haemophilus Influenzae type b Infection | Syphilis | Congenital Syphilis | Gonorrhea | Neonatal Tetanus | Enteroviruses Infection with Severe Complications | HIV Infection | AIDS | Hansen's Disease |
|-------------|---------|-------------------------|--|----------|---------------------|-----------|------------------|---|---------------|------|------------------|
| Total       | 54      | 6                       | 0  | 634      | 0                   | 340       | 0                | 0   | 198           | 118  | 0                |
